

MAKING THE  
WORLD INDOORS  
A BETTER PLACE.

## WE'RE ON A MISSION TO MAKE THE WORLD INDOORS A BETTER PLACE.

### Where do you spend the majority of your time?

The EPA says almost **93% of our time is spent indoors**. Ensuring the indoor air you breathe and surfaces you touch are keeping you healthy and safe is a priority. **Buildings that work with CASPR – Continuous Air and Surface Pathogen Reduction – ensure the indoor air we breathe is the healthiest it can be.**

CASPR's active indoor environmental technology was developed for healthcare but is now available everywhere. Our patent-pending air + surface disinfection solutions **continuously destroy harmful molds, bacteria such as staph and MRSA, and viruses** – even the virus that causes COVID-19.

**CASPR is a disinfectant technology.** Other technologies claim to purify the air. Disinfectants work better to kill bacteria, viruses and molds, while purifiers are more efficient at reducing dust and pollen particles in the air – which CASPR also does.

The disinfectant technology, installed in air ducts or as a small, visible unit – puts trace amounts of hydrogen peroxide into the air and on surfaces, **killing up to 99.96% of indoor contaminants**. CASPR is safe for people, pets and plants.

The building you are in right now, from the QR code you opened, is protected by CASPR technology that **helps buildings work for you, not against you.**
